

Green path

Embracing Nature for a Better Future

Presented by:
Vladyslav Savchenko
Nikita Koshovyi

Introduction

We decided to create an app “Green Path” for increasing the variety of routes runners can take and maybe rediscover Linz! Many runners around the globe stick to their routine route and are not eager to change it. Our app is an attempt to provide some motivation to runners and encourage them to explore Linz whilst doing what they intended to do in the first place.

Vision & Mission

Our Vision

- Present Linz as a green and eco-friendly city. Also, paths between trees are more or less connected with more trees, which provide shadow and more importantly a more pleasant view.
- Trees theme can also serve as some kind of a collectible game, where discovering more trees proves you as a true Linz tree explorer (like exploring in a small area, not each individual tree).

Our Mission

Present a path generating app that provides randomized, tree-dense routes.

Project demonstration

What should be improved

1. Better interface and visuals.
2. Pathing sometimes makes you turn back and run from where you came from after discovering a tree.
3. Pathing can go through dense streets and this should be solved.

Conclusion

In conclusion, many people don't leave their comfort zone and might not realize what can be found in the city they live in. The best part of such an exploration is that it does not interrupt the lifestyle of a person who decided to try it out and rediscover Linz!

Thank You!
